

DISCREPANCY RESOLVED

Why Photographing Poll Tapes and Comparing Them to Reported Results is Important

Click on image to view details

Two poll tapes from Roswell 01, Cobb County, Georgia, indicate two voting machines.

Results downloaded on 11/07/20 show votes from only one poll tape (the one on the left). Trump received 245 votes and Biden 89. The other votes are missing.

A Cobb County audit caught the mistake. [Poll tape photos](#) taken by the Coalition for Good Governance showed the missing votes and [the vote tally was corrected](#). [Results from 11/16](#) now show the totals from both tapes: Trump 487 / Biden 175.

Our #CountTheVote project also found the problem, and would have reported it, if it was not corrected. According to the National Election Defense Coalition [less than 25% of states](#) do an audit that would catch this type of error. So our work is needed.

Cobb audit adds 400 ballots to election results

A routine audit conducted by Cobb County elections officials found about 400 ballots were not included in Nov. 3 election results, but the new votes won't change the outcome of any races.

The county said Monday that 340 ballots cast at the precinct housed at East Cobb Church of Christ on Roswell Road in Marietta were initially not included in last Tuesday's tabulation due to a glitch with a memory card.

Cobb County Elections & Registration Director Janine Evler said results on memory cards for the precinct's two scanners were to be uploaded to the system's tabulation server. However, one of those memory cards was skipped and the results on the card were not added to the server.

"We found it by checking the number of votes uploaded against what was documented on the forms by the poll workers," she said. "Again, that's why we audit everything."
